

# STONE AGE STUDENTS

Year 3 have been learning all about the Stone Age. Here are some highlights:

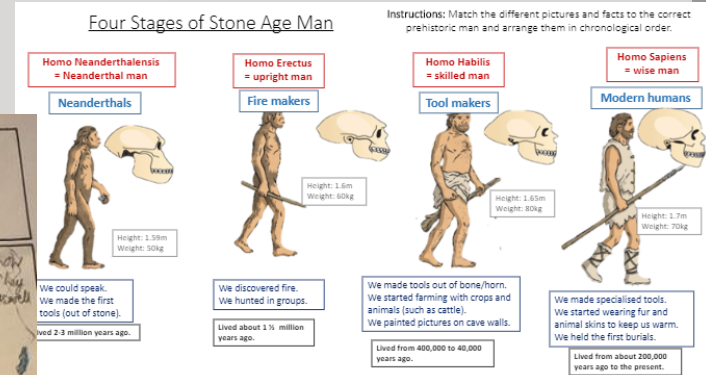

**IT STARTED 3,000,000 YEARS AGO!**

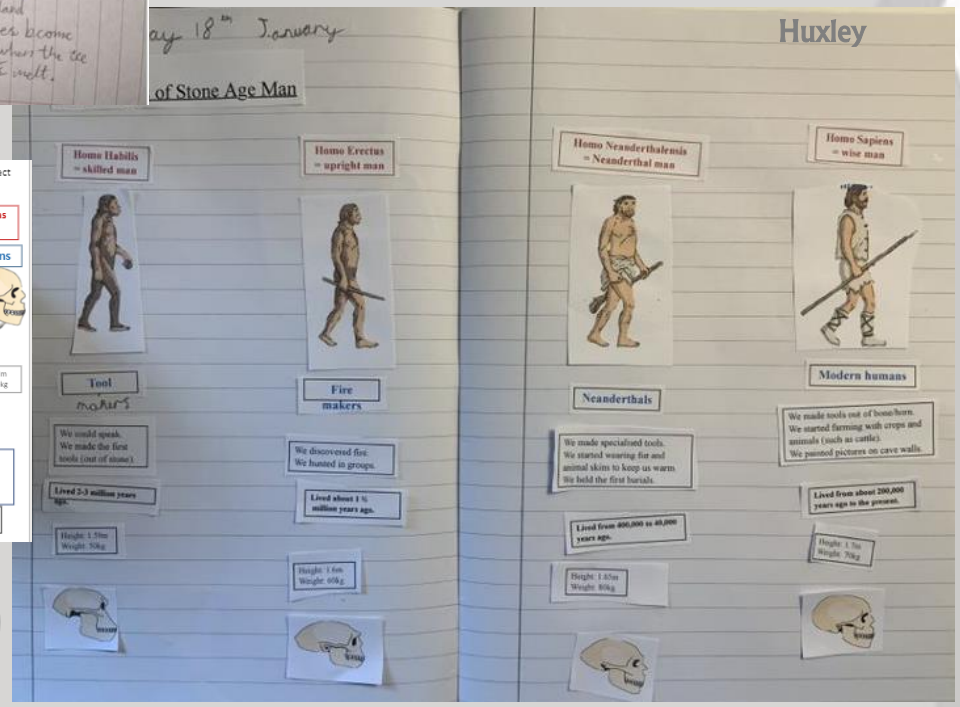

18<sup>th</sup> January  
of Stone Age Man

**EVERYTHING WAS MADE FROM STONE (OR WOOD OR BONE) UNTIL THE METAL AGES.**

Henry M

**HOMO HABILIS WAS THE FIRST SKILLED MAN.**

# WANTED

Woolly Rhinoceros

Woolly Rhinoceros in the land!  
The Woolly Rhinoceros has two big horns on the end of his long neck and a thick brown coat. The woolly Rhinoceros is 8ft tall and

15yr long - Some big one lost mission.

Don't worry he is a herbivore that means he eats plants not meat so he won't eat you. BUT he can get out of his long horns! Lives in the grasslands of Southern England. They usually roam around on their own but some times live in small groups so be careful!

Reward: Honey Honey AND More Honey

Matilda

# WANTED SABRE TOOTH CAT

Lived  
Pleistocene Epoch  
(55,000 to 11,000 years ago)

Diet  
Carnivore.  
Hunted and scavenged  
deer, bison, goat, camel,  
large mammals.

Size 2.6m tall  
4m long

Patterned fur like a leopard

Lived  
Asia, Africa,  
North and South America

Sebastien

# WANTED WOOLLY MAMMOTH

We have lost our woolly mammoth. He is 3 metres high and covered in brown woolly fur. He is really big! He has large white tusks that curl up.

He usually lives with us in our cave in the Arctic. He uses his tusks to dig things out of the snow.

Do not be afraid of him because he is usually friendly. He only fights other mammoths, and he only eats plants and vegetables.

## WATCH OUT! PREHISTORIC BEASTS

Nathaniel

### WHAT WOOLLY MAMMOTHS ATE

Mammoths were herbivores that meant they ate plants. More specifically, they were grazers so they ate grass. They chewed by putting grasses between their upper and lower molars and after that chewed. They also ate other types of plants and flowers.

### WHEN THEY LIVED & DIED

Most mammoth populations had died around 10,000 years ago although a small population of 500-1000 woolly mammoths lived on an island in the Arctic until 1650 BC. This was approximately 1000 years after the pyramids at Giza were built. The woolly mammoths lived half 1 million years ago.

Some experts think Mammoths were hunted until they were extinct by the humans.

# WANTED

The **Sabre-toothed Cat** is 4m long and 2.6m tall. They have long curved canine teeth and leopard like patterned fur.

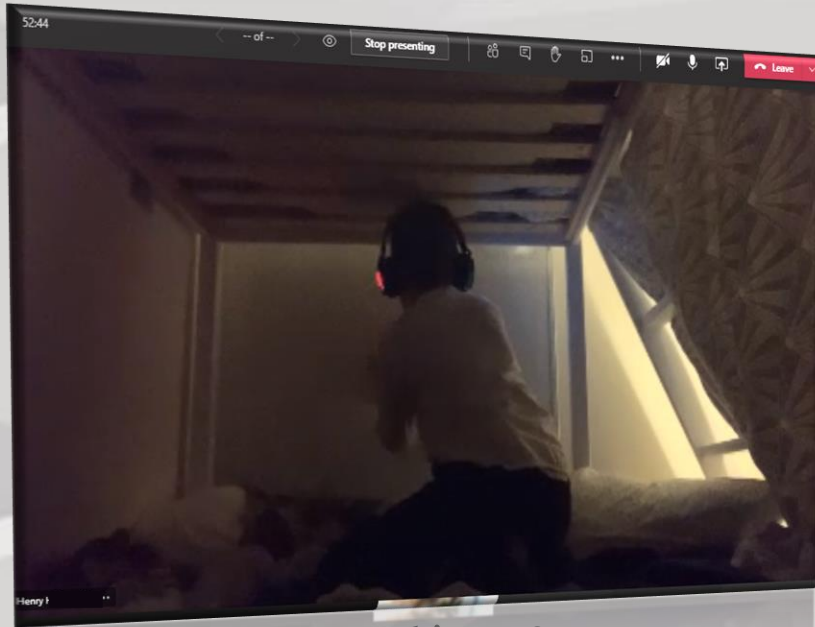

They live in caves in Asia, Africa, North and South America.

They eat deer, buffalo and camels. They are carnivores.

It looks like a bear and might try and eat YOU!!
